Re: Fullstack Developer (US - ET) — Chooose

I am excited to apply for the Fullstack Developer role at Chooose, a company at the forefront of innovative climate action. As a developer with a strong AI background, I am particularly drawn to Chooose's mission of leveraging technology to combat climate change, and I believe my skills align perfectly with this role's requirements.

My experience as a full-stack developer has equipped me with proficiency in many of the technologies you seek, including React, Python, and Azure. I have built end-to-end systems, integrating AI-driven features using React and Django for the frontend and Python for automation pipelines. For instance, at Cybasoft, I led the development of a credit control system, integrating SAP APIs, which improved the client's debt collection process by 15%. Additionally, my work in AI evaluation and dataset annotation at Sama Kenya and Digital Divide Data has honed my data processing and CLI skills, ensuring I can contribute to Chooose's AI/ML initiatives.

With my technical expertise and passion for sustainable solutions, I am confident I can contribute to Chooose's growth and make a meaningful impact on the climate action space.

Sincerely,

Centrine Ong'aria
