Re: Full-Stack Developer — Wing Assistant

I'm applying for the Full-Stack Developer role at Wing Assistant because your focus on empowering businesses with intelligent assistance immediately clicked with my background in AI and automation. I'm keen to build tools that directly enhance productivity and streamline operations, which seems central to what you do.

As a Full Stack Developer at Copy Cat Group and Cybasoft, I've consistently built robust systems using JavaScript, React, Node.js, and Django, alongside databases like PostgreSQL and MongoDB. My work has included integrating critical systems, such as my SAP API + Credit Control System Integration project, and designing enterprise architectures. Additionally, my experience with Python-based automation pipelines and Gemini API gives me a unique perspective on integrating intelligent features into full-stack applications.

I'm ready to contribute immediately to your team's development efforts.

Sincerely,

Centrine Ong'aria
